

Daily Report

Yuxin Ma

07.01.2013

Intro

Today I mainly focus on [1] that will be reported in the seminar. Besides the color theme extraction algorithm, this paper also presented a good example of how to do a crowdsourcing project on crowdsourcing platform like Amazon Mechanical Turk. Also I made an initial version of Attic Framework Milestone 1 Plan for the coming summer vacation, which will be finished tomorrow. Today is the last day that the data mining course has morning sessions. From Tuesday to Friday there will only be sessions in the afternoon.
